Sunday was the hottest day in recorded history, according to preliminary data from a climate tracking agency monitoring temperatures since the mid-1900s.

It's the second consecutive year average global temperatures have crashed through shocking climate records and will not be the last, as planet-warming fossil fuel pollution drives temperatures to shocking new highs.

自上世紀中葉以來一直監測氣溫的氣候追蹤機構提供的初步資料顯示,上周日(7月21日)是有史以來最熱的一天。

這是全球平均氣溫連續第二年打破氣候紀錄,而且不會是最後一次,因為化石燃料導致的全球變暖導致氣溫屢破新高。
